Develop a school management web application which will contain at minimum user (student, instructor and administrator) and course modules. The web application should be able to register users and courses and view their reports. You are allowed to add more modules as much as you can.

Use the following technologies to accomplish this project:

- Java programming language and Spring MVC framework
- HTML, CSS and JavaScript (option)
- PostgreSQL

Progress assessment will be done on the 10th week and final submission on 14th week.
